

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claim 1 (currently amended): An electronic device, comprising:

a body;
a rotating member rotatably connected to the body and having first and second surfaces;
a first display disposed on the first surface of the rotating member; and
an image capture sensor disposed on the second surface of the rotating member, to
allow capture of images from multiple angles when the rotating member is
rotated;
wherein the first display is electronically coupled with the body and displays information
provided by the body.

Claim 2 (original): The electronic device as claimed in claim 1, further comprising a second display disposed on the body, to display an image captured by the sensor.

Claim 3 (currently amended): The electronic device as claimed in claim [[1]] 2, wherein the second display enters a standby mode when the rotating member is rotated to a predetermined angle at which the sensor faces the body.

Claim 4 (original): The electronic device as claimed in claim 3, wherein in standby mode the second display is disabled.

Claim 5 (currently amended): An electronic device, comprising:

a body;
a rotating member rotatably connected to the body and having a first surface and a
second surfaces opposite to the first surface;
a first display disposed on the first surface of the rotating member; and
an image capture sensor disposed on the second surface of the rotating member, to
allow capture of images from multiple angles when the rotating member is
rotated ~~The electronic device as claimed in claim 1, wherein the rotating member~~

comprises a first metal contact portion and the body comprises a second metal contact portion, and the second display is enabled when the first metal contact portion contacts the second metal contact portion, and the second display enters a standby mode when the first metal contact portion is separated from the second metal contact portion.

Claim 6 (original): The electronic device as claimed in claim 5, wherein the rotating member has a shaft rotatably connected to the body, and the first metal contact portion is formed on the shaft.

Claim 7 (original): The electronic device as claimed in claim 6, wherein the shaft has a notch interrupting the surface of the second contact portion, such that the first metal contact portion separates from the second metal contact portion when the notch aligns with the second metal contact portion.

Claim 8 (original): The electronic device as claimed in claim 7, wherein the second metal contact portion is pointed.

Claim 9 (original): The electronic device as claimed in claim 1, wherein the sensor is a CMOS sensor.

Claim 10 (original): The electronic device as claimed in claim 1, wherein the electronic device is a mobile phone.

Claim 11 (currently amended): An electronic device with display and sensor, comprising:
a body;
a rotating member rotatably connected to the body and having first and second surfaces;
a first display disposed on the first surface of the rotating member;
a second display disposed on the body; and
a sensor disposed on the second surface of the rotating member, to capture an image and display it on the second display,
wherein the second display enters a standby mode when the second surface of the rotating member is rotated to face the body; and

wherein the first display is electronically coupled with the body and displays information provided by the body.

Claim 12 (original): The electronic device as claimed in claim 11, wherein the electronic device is a mobile phone.

Claim 13 (currently amended): The electronic device as claimed in claim 12, wherein the first display is a text display, and when the second display enters a standby mode, the first display displays a plurality of text messages.

Claim 14 (new): The electronic device as claimed in claim 3, wherein the first display is a text display, when the second display enters a standby mode, the first display displays a plurality of text messages.

Claim 15 (new): The electronic device as claimed in claim 2, wherein the first display is smaller than the second display.

Claim 16 (new): The electronic device as claimed in claim 2, wherein the first display is monochrome and the second display is multicoloured.
